

MYTECGLOBAL

PROPOSAL · 18 June 2026

OLGA

The professional network that knows who's nearby.

A smart networking, matchmaking & deal-making mobile app

Connect · Match · Meet Nearby · Grow Business

Prepared for **OLGA**

Prepared by **MYTecGlobal**

Automate smarter. Scale without the chaos.

Executive Summary

The opportunity

OLGA wants to own the connection layer for its professional community. Today that value is scattered across business cards, chat groups and chance encounters and deals are lost because the right two people never know they're a fit, or that they're standing metres apart.

The solution

OLGA Connect closes that gap. Members build a verified profile, get intelligently matched, chat and request structured quotes in-app, and receive a smart nearby alert when a match is at the same venue, so a hallway chat at an event can become a contract.

Why MYTecGlobal

Built by an experienced mobile team on a modern, proven stack (React Native for the app, Node.js for the backend and PostgreSQL for data). We work in clear stages, hand the full source code and IP to OLGA, and run on standard cloud hosting. The plan ships a working product first, then grows from there.

Chat: a quote, sent in-app

The Concept: Turning Proximity Into Meaningful Business Connections

In one line: professionals build a profile, get matched to the right people, chat and request quotes in-app, and get an alert when a match is at the same event or venue, turning proximity into deals.

Be found

A verified profile: role, company, what you offer and what you need.

Get matched

The engine reads each member's intent and matches by meaning, not just keywords or tags.

Do business in-app

Message, share files and send structured quote requests, without leaving the app.

Meet nearby

Opt-in alerts when a strong match is at the same event or venue, restaurant or hotel.

Home: one-tap actions

Nearby: "matches here now"

What We're Building in Phase 1

These five features make up the first version of OLGA Connect. Anything beyond them comes in a later phase.

LinkedIn or In-App Sign-In

Members can sign in with their LinkedIn account, or register in the app with an email or mobile number. Either way, they can bring across their role, company and headline from LinkedIn so there is less to type.

In-App Chat

Chat opens only after both people accept the connection. From there they can message each other, share files and ask for quotes, all inside the app.

Intent Capture

Each member writes, in plain words, what they need and what they offer, such as “looking for a packaging supplier”. The app matches on what they say, not on a fixed list of tags.

Connect Requests (Accept / Decline)

Connecting works by request and accept, just like LinkedIn. A member sends a request, or accepts one from their queue. There is no direct contact and no way to export anyone's details.

Live Mode / Proximity Matching

With Live Mode on, the app lets the member know when a strong match is nearby, which is especially useful at events and expos. The match arrives as a request in their queue, not as direct contact.

The matching engine behind it all

Smart matching ties these five features together. More on the next slide.

The Matching Engine That Understands Meaning

The app matches people by what they mean, not just the words they type. Here is the difference.

✗ Keyword / Tag Filters

Matches only when the exact words line up. If one person tags “warehousing” and another searches “warehouse space,” the system can miss them completely.

You only find what you typed word for word, so good matches get missed.

✓ Semantic Intent Matching (our approach)

It reads what each person offers and needs, then works out what they actually mean, the way a good introducer would.

So it knows “cold-chain storage” and “temperature-controlled warehouse” mean the same thing, even with no words in common.

A QUICK EXAMPLE: TWO PEOPLE AT THE SAME EXPO

● Person A asks for

“Cold-chain storage for pharma, ~500 pallets, near Shah Alam.”

● Person B's profile

“We run temperature-controlled warehouses in Selangor for healthcare clients.”

● The engine's result

92% match, flagged as soon as both arrive at the same event. A keyword filter would miss it.

How It Works: A Real Example at an Event

THE EXPO THAT CLOSED A DEAL

★ **Events are full of the right people. The hard part is knowing which ones.** OLGA Connect points each member straight to the few who matter.

The Full Journey, Start to Finish

How a member goes from signing up to a real business connection, and the screen states we plan for along the way.

We plan for every screen, not just the easy ones

● Empty states

First-time and no-match screens that guide the member forward.

● Loading states

Clear feedback while matching or fetching nearby.

● Error states

Clear recovery when GPS is off, the user is offline, or sign-in fails.

Connections Stay in the Member's Control

A nearby match sends an alert and a connect request that waits in a queue. No messaging, contact or export happens until the other person accepts.

HOW A NEARBY MATCH BECOMES A CONNECTION

Match and alert

Live Mode finds a strong match nearby and lets the member know. They see a profile, not a phone number.

Request, not contact

A connect request is sent and waits in a queue. No messaging, contact details or export happen yet.

Accept to unlock

The connection is only made once the other person accepts, and that is when the chat opens. Either side can say no.

My Connection Queue

REQUESTS RECEIVED, TO ACCEPT (2)

Rajesh Kumar

IT Procurement · 94% match

Accept

Ignore

Lina Mahmud

Customs Broker · 89% match

Accept

Ignore

SENT, WAITING TO BE ACCEPTED (1)

Suresh T.

Packaging Supplier · 85% match

Pending

No direct contact: a request has to be accepted before anyone can message, and details are never exported. The member stays in control, just like on LinkedIn.

Assumptions, Dependencies & What's Out of Scope

So we're fully aligned on scope before development begins. Items below are confirmed in a short discovery workshop.

Assumptions

- Sign-in supports both LinkedIn and in-app (email / mobile).
- LinkedIn sign-in & profile import use a LinkedIn developer app, subject to LinkedIn's terms.
- OLGA provides branding, content and approvals on time.
- Semantic matching & proximity are opt-in and use third-party services billed at actual.
- Phase 1 can deliver both Android and iOS, as long as the Play and App Store accounts are ready.

Dependencies

- Design sign-off gates backend build and the app build.
- LinkedIn developer-app credentials gate LinkedIn sign-in (in-app sign-in always works).
- OLGA cloud environment gates backend; Play and App Store accounts gate release.
- OLGA UAT sign-off gates go-live.

Out of scope (this phase)

- A separate public web or desktop app (Phase 1 is mobile).
- Nearby-events discovery / event aggregation (Phase 2).
- Deep two-way LinkedIn data sync beyond sign-in & basic import.
- Contact export or any direct contact before a request is accepted.
- Marketplace, payments & ERP/CRM integrations (Phase 3).

Stage-wise Development Roadmap

Five clear stages over ~8 weeks. Dates are indicative and shift from the actual kick-off.

1	Design Sign-off Wk 1-2	Deliverables A full clickable design covering sign-up and import, intent, Live Mode, chat and the connect-request flow, plus the empty, loading and error screens.	Depends on Brand assets & content from OLGA Owner MYTec (design) · OLGA (approval)
2	Backend & Matching Infrastructure Wk 2-5	Deliverables LinkedIn + in-app auth, profile & intent model with LinkedIn import, semantic matching engine, geo / proximity engine, chat backend, APIs.	Depends on Design sign-off · LinkedIn & event sources · cloud Owner MYTec (build) · OLGA (accounts)
3	Mobile Build (Android & iOS) Wk 3-6	Deliverables Android and iOS apps covering all five features (Live Mode, chat and the connect-request flow), wired to the APIs with every screen state.	Depends on Design sign-off · Stage 2 APIs Owner MYTec
4	Integration & QA Wk 6-7	Deliverables End-to-end integration, functional & regression testing, proximity & match-accuracy checks, bug-fixing, release candidate.	Depends on Stages 2 & 3 complete Owner MYTec (QA) · OLGA (feedback)
5	UAT & Release Wk 8	Deliverables UAT support & fixes, Play Store and App Store submission & launch, handover of source code, IP and documentation.	Depends on OLGA UAT sign-off · store accounts Owner OLGA (UAT) · MYTec (release)

Phase 1: The Core Network

Everything that goes live in the first release. A solid, working product from the start.

What's included in Phase 1

- ✓ LinkedIn or in-app sign-in & verified profiles
- ✓ Intent capture (plain-language needs & offers)
- ✓ Semantic matching engine
- ✓ Live Mode / proximity matching
- ✓ In-app chat & file sharing
- ✓ Connect requests (accept / decline)
- ✓ Android & iOS apps + admin console

Technology & Infrastructure

The tools we build with, and the minimum server setup needed to run Phase 1.

WHAT WE BUILD WITH

- **Mobile app** React Native (TypeScript), Android and iOS
- **Backend & APIs** Node.js with Express and NestJS, REST APIs
- **Database** PostgreSQL, with PostGIS for location
- **Matching engine** Text embeddings with vector search (pgvector)
- **Real-time chat** WebSockets (Socket.IO)
- **Alerts** OneSignal for push notifications
- **File sharing** S3-compatible object storage
- **Sign-in** LinkedIn plus email or mobile OTP
- **Admin console** React web app

Minimum server setup for development (Phase 1)

Backend Application including Database, and Matching Engine

2 vCPU, 8 GB RAM, 50 GB SSD

Cache (Redis)

1 GB

Push (OneSignal)

Free tier to start

Cloud host

AWS, GCP, Azure or DigitalOcean

Hosting, domain and third-party usage are paid by OLGA. We can manage these at actual cost.

Similar Apps Our Team Built

A quick look at relevant apps our team has already delivered.

B BlueCaller

Social network + marketplace

A platform for blue-collar professionals that brings together a niche social network, an open marketplace and business tools. It connects homeowners with trusted tradespeople, and helps professionals grow their business.

Why it fits OLGA Connect: Profiles, connections, matching and a marketplace, the same building blocks as OLGA Connect.

L Local Genie

Local deals + discovery

A local deals app that helps people discover offers near them across restaurants, shops, fitness centres and learning hubs, so everyday saving is simple.

Why it fits OLGA Connect: Location and nearby discovery, the same proximity ideas behind OLGA Connect.

Both are live products built by our team. We are happy to walk through either on a quick call.

Commercials

All figures in MYR and indicative. We confirm them after a short discovery workshop.

Phase 1: scope of work (one-time)

- ✓ Discovery, UX & clickable design
- ✓ Professional static website for OLGA
- ✓ Member profiles, verification & smart directory
- ✓ AI matching engine & suggestions
- ✓ In-app chat, file share & quote requests
- ✓ Nearby proximity alerts (geo-engine)
- ✓ Post-a-requirement & smart notifications
- ✓ iOS + Android apps & admin console
- ✓ QA, app-store launch & handover

TOTAL EFFORT

8 weeks

PAYMENT

By milestones

NOTE

Hosting & ongoing costs

Cloud hosting, server, domain and other ongoing operational & support costs are to be borne by OLGA. MYTecGlobal can manage these on OLGA's behalf at actual cost if preferred.

Indicative future phases (optional)

Phase 2 Engagement & trust: reviews, events, premium tiers

Phase 3 Monetise & scale: marketplace, payments, integrations

Payment terms (Phase 1)

- 1 Kick-off / mobilisation** 30%
- 2 Design sign-off** 15%
- 3 Build & matching engine** 40%
- 4 UAT, go-live & handover** 15%

Payment Schedule, Tied to Real Milestones

Each payment is linked to a finished, checkable stage of the work, not just a date on the calendar. Total: MYR 31,500.

#	MILESTONE	WHAT'S VERIFIED BEFORE RELEASE	SHARE	AMOUNT
1	Kick-off / Mobilisation	Project start, team & environment set up, discovery confirmed	30%	MYR 9,450
2	Design Sign-off	Full end-to-end clickable design approved by OLGA	15%	MYR 4,725
3	Backend & Matching Engine Ready	Semantic matching, geo/proximity & chat verified	20%	MYR 6,300
4	Mobile Build Feature-Complete	All five modules working on Android and iOS	20%	MYR 6,300
5	UAT Pass & Release / Handover	UAT signed off, app live, source code & IP handed over	15%	MYR 4,725
TOTAL INVESTMENT (after discount)			100%	MYR 31,500

Notes & Conditions

1 Validity

This proposal is valid for 60 days from the date of issue.

3 Hosting & infrastructure

Cloud hosting, server, domain and ongoing operational costs are borne by OLGA.

5 Scope & changes

Covers the Phase 1 scope above; new requirements are handled via a change request.

7 Timeline

Estimated 8 weeks from kick-off, mapped to the stage-wise roadmap and subject to timely feedback and sign-offs.

9 Source code & handover

On full payment of Phase 1, the OLGA Connect custom source code, code documentation to OLGA, who may share them with its investors and stakeholders. MYTecGlobal retains its pre-existing, reusable components if any (licensed to OLGA for use within the app), and all shared code remains confidential under the mutual NDA.

2 Pricing & taxes

All figures are in MYR and exclusive of SST. MYR 31,500 reflects a special discount for OLGA.

4 Third-party fees

App-store accounts, SMS/push, payment-gateway and similar charges are billed at actual.

6 Client inputs

OLGA provides branding, content, data and required approvals in a timely manner.

8 Payment & ownership

Payments are milestone-linked to verified deliverables. Source code transfer to OLGA on full payment.

Let's build OLGA together.
